SOFTWARE TRAINING GUIDE / JIRA CLOUD

Create and Assign a Task in Jira Cloud

Audience: New team members | Time: 5–7 minutes | Level: Beginner

Learning objective

After this lesson, you will be able to create a Jira work item, assign it to a teammate, and confirm that the task is ready to be tracked.

Before you begin

Sign in to Jira Cloud. You need access to a Jira space (previously called a project), permission to create work items, and permission to assign them. The exact fields available may differ by your organization's configuration.

Scenario

Your team needs to update an onboarding checklist. You will create a task that describes the change and assign it to the person responsible for completing it.

Create the task

1. In the Jira navigation bar, select Create (+). A work-item creation dialog opens.
2. Check the Space and Work type at the top of the dialog. Select the team's space and choose Task, if available.
3. In Title (called Summary in some Jira versions), enter:
   Update the new-hire onboarding checklist
4. In Description, enter the task details below. Explain the expected result so the assignee knows when the work is finished.

> Task description
> Review the new-hire onboarding checklist and update any outdated links or instructions.
>
> Completion criteria
> • All checklist links open successfully
> • Outdated steps are corrected
> • The revised checklist is ready for team review

5. Locate Assignee in the creation form and choose the teammate responsible for the update. If the field is not visible, expand to the full form or use Configure fields; you can also assign the work item after creating it.

6. Complete any other required fields shown by your Jira space, then select Create.

Verify your work

Open the newly created work item using its confirmation link, the space’s list, or its board. Confirm that the title, description, and assignee match what you entered. Record the work-item key, such as TEAM-123, so you can share or locate the task later.

Practice activity

In a training or test space, create a second task titled Review the support FAQ. Assign it to yourself and add one sentence explaining what a successful review should accomplish.

Success check

You are finished when you can open the practice task and show its title, assigned owner, and completion criteria without assistance.

If something does not match

Cannot find Task: Work types vary by space. Ask your team which type to use.
Cannot assign a teammate: Check whether the person has access and whether you have assignment permission.
Missing fields: Expand the creation form or update the item after it is created.

Trainer notes and source

Jira Cloud labels and layouts may vary by rollout and space configuration. This sample uses Atlassian’s current “work item” terminology. Source: Atlassian Support, Create a work item and a subtask, https://support.atlassian.com/jira-software-cloud/docs/create-a-work-item-and-a-subtask/
